**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by **Dorfner (US 1,794,281)**.

See bags 58 and media – screens 41.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combined teachings of **Holland (US 5,833,862)** and **Hollis (US 808924)** and **Rink (US 6,143,172)** and **Giberson (US 5,207,903)**.

**Holland** discloses:

A first arrangement of the polymer as a filtration media calls for the solidifying polymer to be encased and sealed within individual bags of single layer textile material. Each bag, filled with a measured amount of the solidifying polymer, is sealed to form a solitary chamber of solidifying polymer within a single layer envelope of textile material.

**Holland** does not disclose the use of a hoist, davit, or bags as claimed. **Hollis** discloses a "crane" 20 to lift the filter from the assembly. **Giberson** discloses the use of a davit assembly (col. 3., lines 20-25) to move the cover of a filter. **Rink** discloses a reinforced filter bag (Fig. 2).

In view of these references, it would have been obvious to one of ordinary skill in the art at the time the invention was made, to modify Holland by incorporating the crane of Hollis to move filter media, the reinforced filter bag of Rink in order to easily and securely move the media, and the davit of Giberson, in order to more easily move the cover assembly of the housing. It is submitted that this combination of references would render obvious, the subject matter of claims 1-19.
